My filefish friend returns

David Graham Patriquin

January 24, 2019 · 🧑🏻

Acropora prolifera - colonies I found in 2015, are doing just fine (it was a new record for Barbados), More about it at <http://versicolor.ca/reef/>

David Graham Patriquin

January 31, 2019 · 🧑

Good News/Bad News on the Reef: Good - this hybrid coral (*Acropora prolifera*) grew 23 cm between 2015 and 2019

The seaweed *Padina sancta-cruscis* is present on the rock (old coral) substrate at left, not at right.

Edit

David Graham Patriquin

January 31, 2019 · 2

Bad news: the seaweed *Padina sanctae-crucis* which was abundant in past years near shore has disappeared from this reef site; havent seen it nearby either.

Edit

David Graham Patriquin

"The Bookie" is launched - I have always wanted to have a "boat" in the Caribbean, finally got it. It all goes in a hockey bag! ("Bookie" is the nickname Nina and I have called each other ever since we got married.)

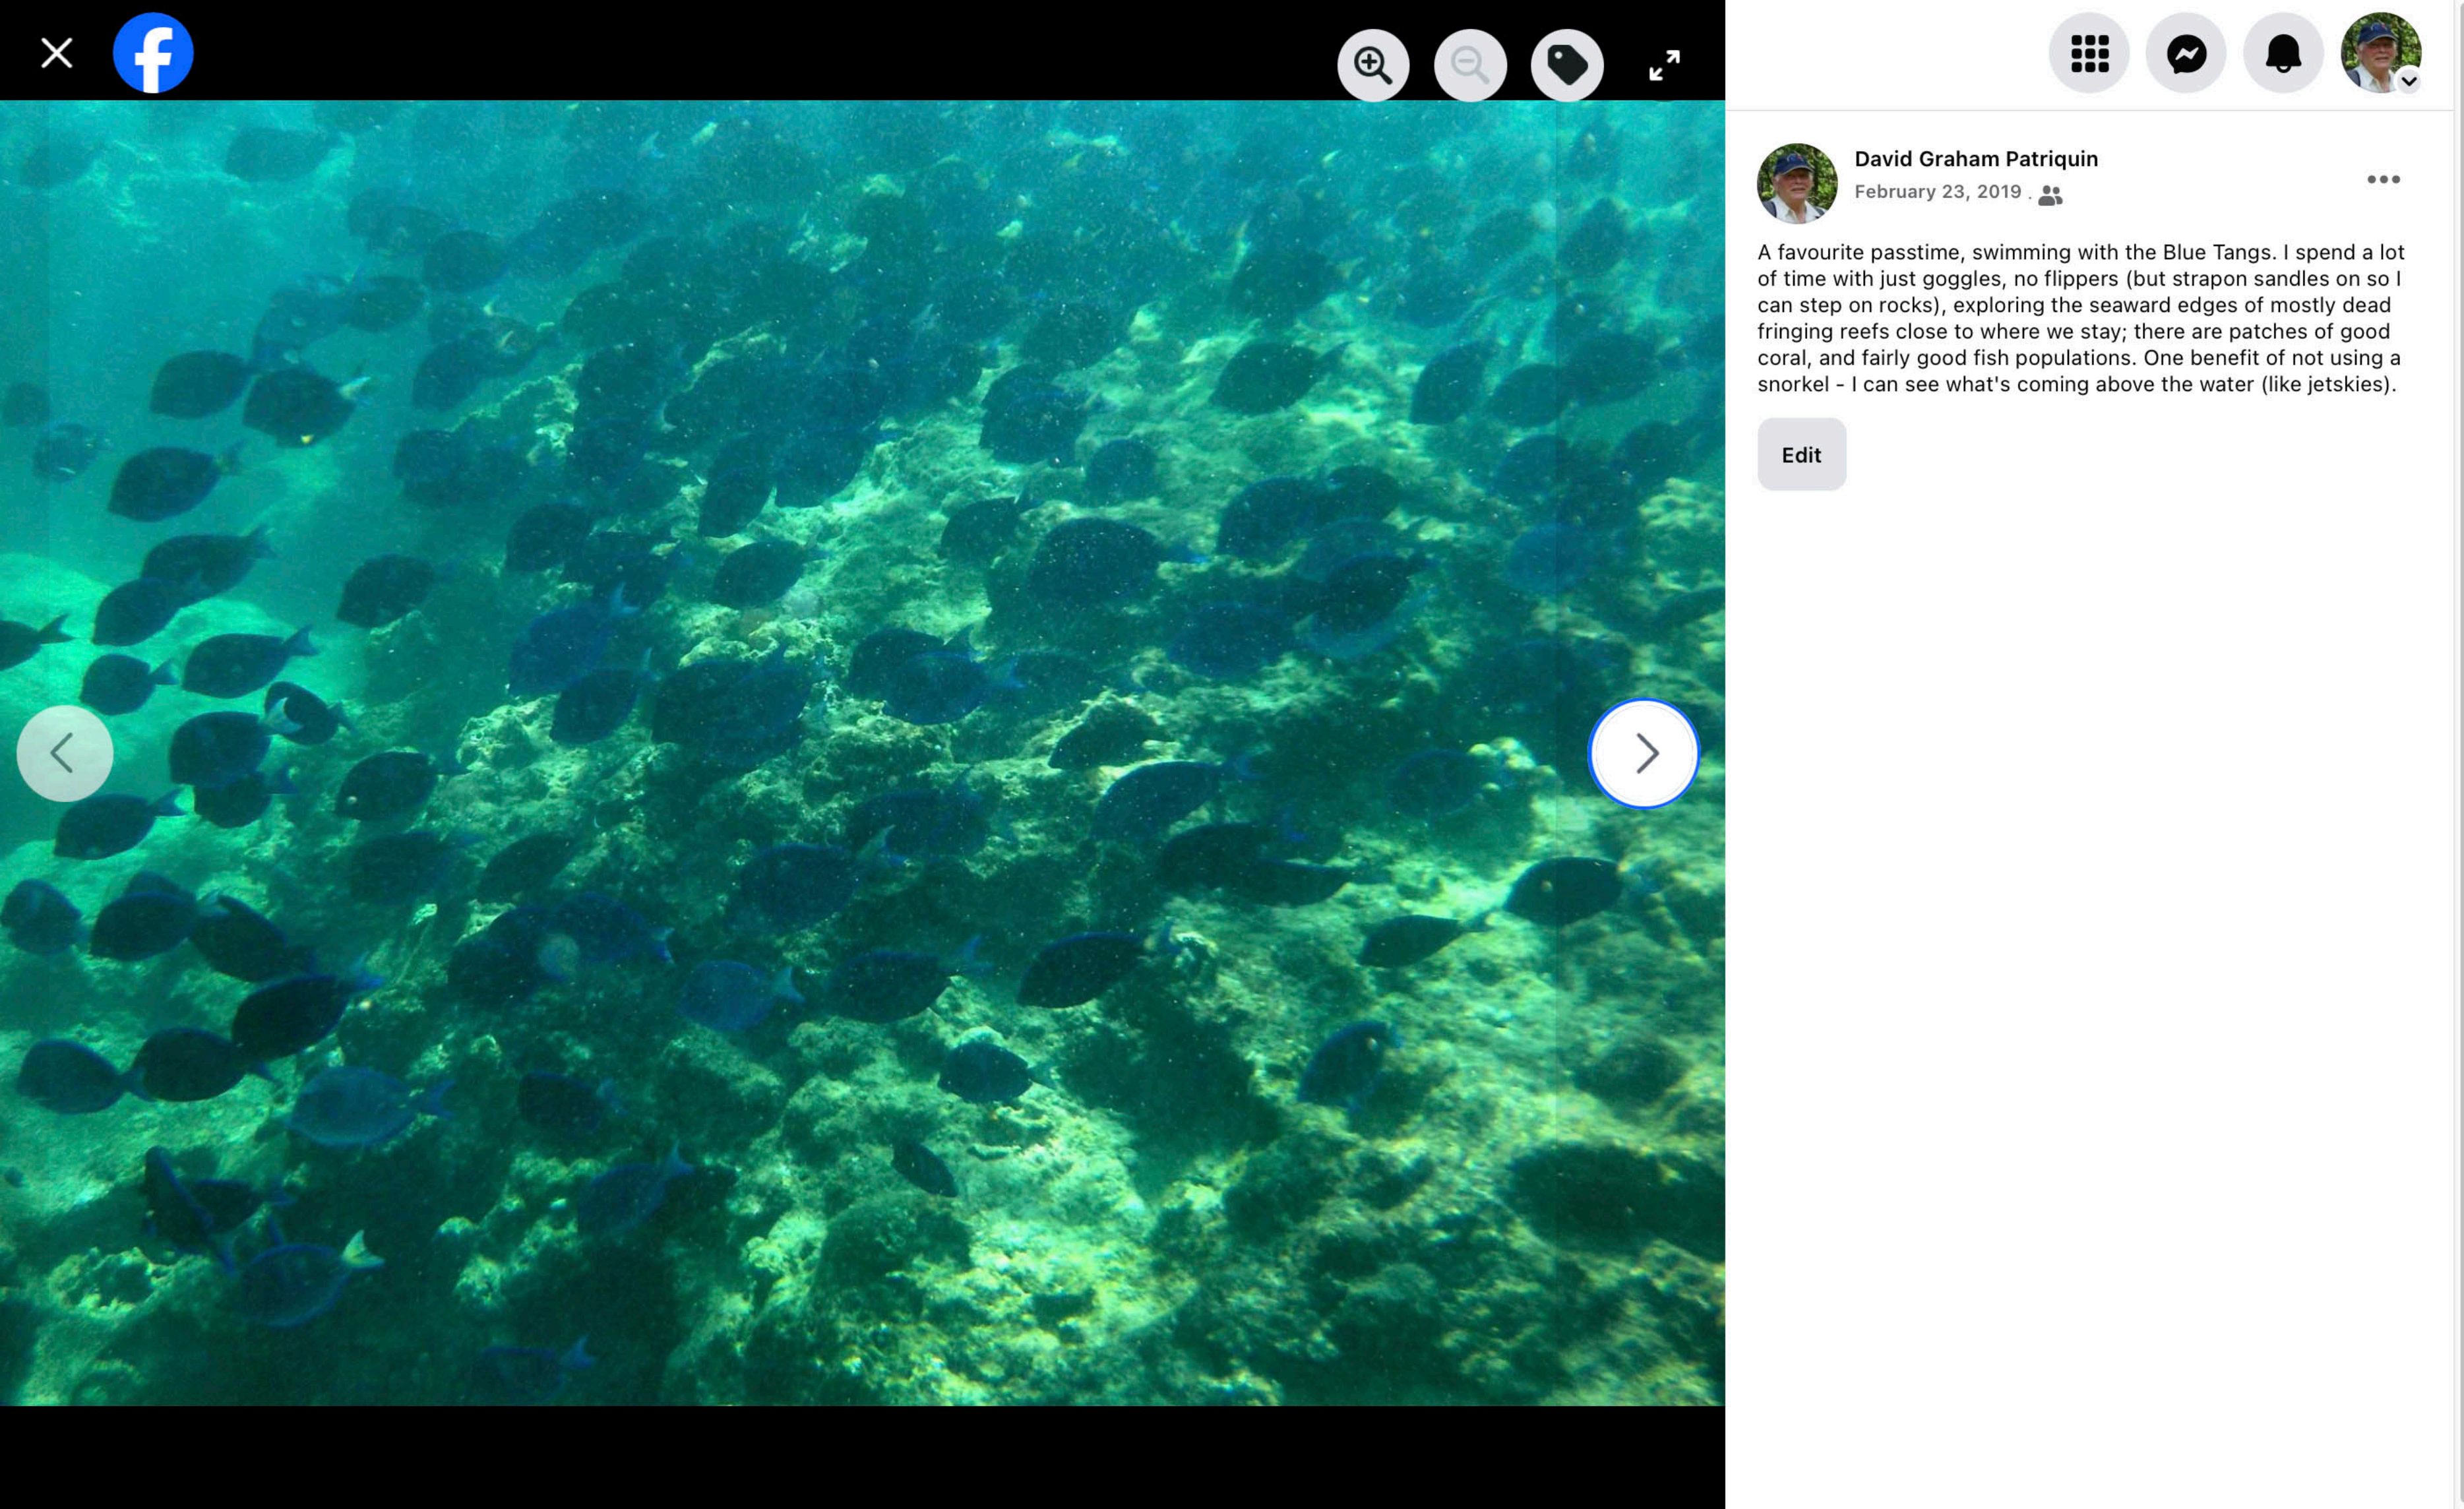

David Graham Patriquin

February 21, 2019 · 🧑🏻

Anchors away. It was wonderful, a bit of a swell and wind going and very stable. So now I can explore the whole coast...

David Graham Patriquin

February 23, 2019 · 👥

A favourite passtime, swimming with the Blue Tangs. I spend a lot of time with just goggles, no flippers (but strapon sandals on so I can step on rocks), exploring the seaward edges of mostly dead fringing reefs close to where we stay; there are patches of good coral, and fairly good fish populations. One benefit of not using a snorkel - I can see what's coming above the water (like jetskies).

Edit

David Graham Patriquin

February 23, 2019 · 

Some pics taken with my backup underwater camera, one of those waterproof point and shoot for under \$200 Canadian. It's a Nikon Coolpic W100 (My regular camera is an Olypus Tough TG4 with GPS, I use it inside an underwater housing for double jeopardy protection). The Nikon is good near the surface when there is lots of light, otherwise, not so good, but it seems fully waterproof.

Lots of finger and stinging coral

Edit

David Graham Patriquin

March 28, 2019 · 2

Occasional sea fan; only small fish. I am thinking about how to answer some questions I have: (i) How unusual are the relatively healthy fish and coral populations of Vauxhall Reef amongst fringing reefs in adjacent stretches (e.g. 2-3 km each way) of the west coast of Barbados; (ii) is there an identifiable pattern to the distribution of "healthy" and "unhealthy" reefs. (For more about the Vauxhall Reef, view <http://versicolor.ca/reef>)
